A SUBSIDIARY OF SWANK CAPITAL

Crude Oil Dynamics

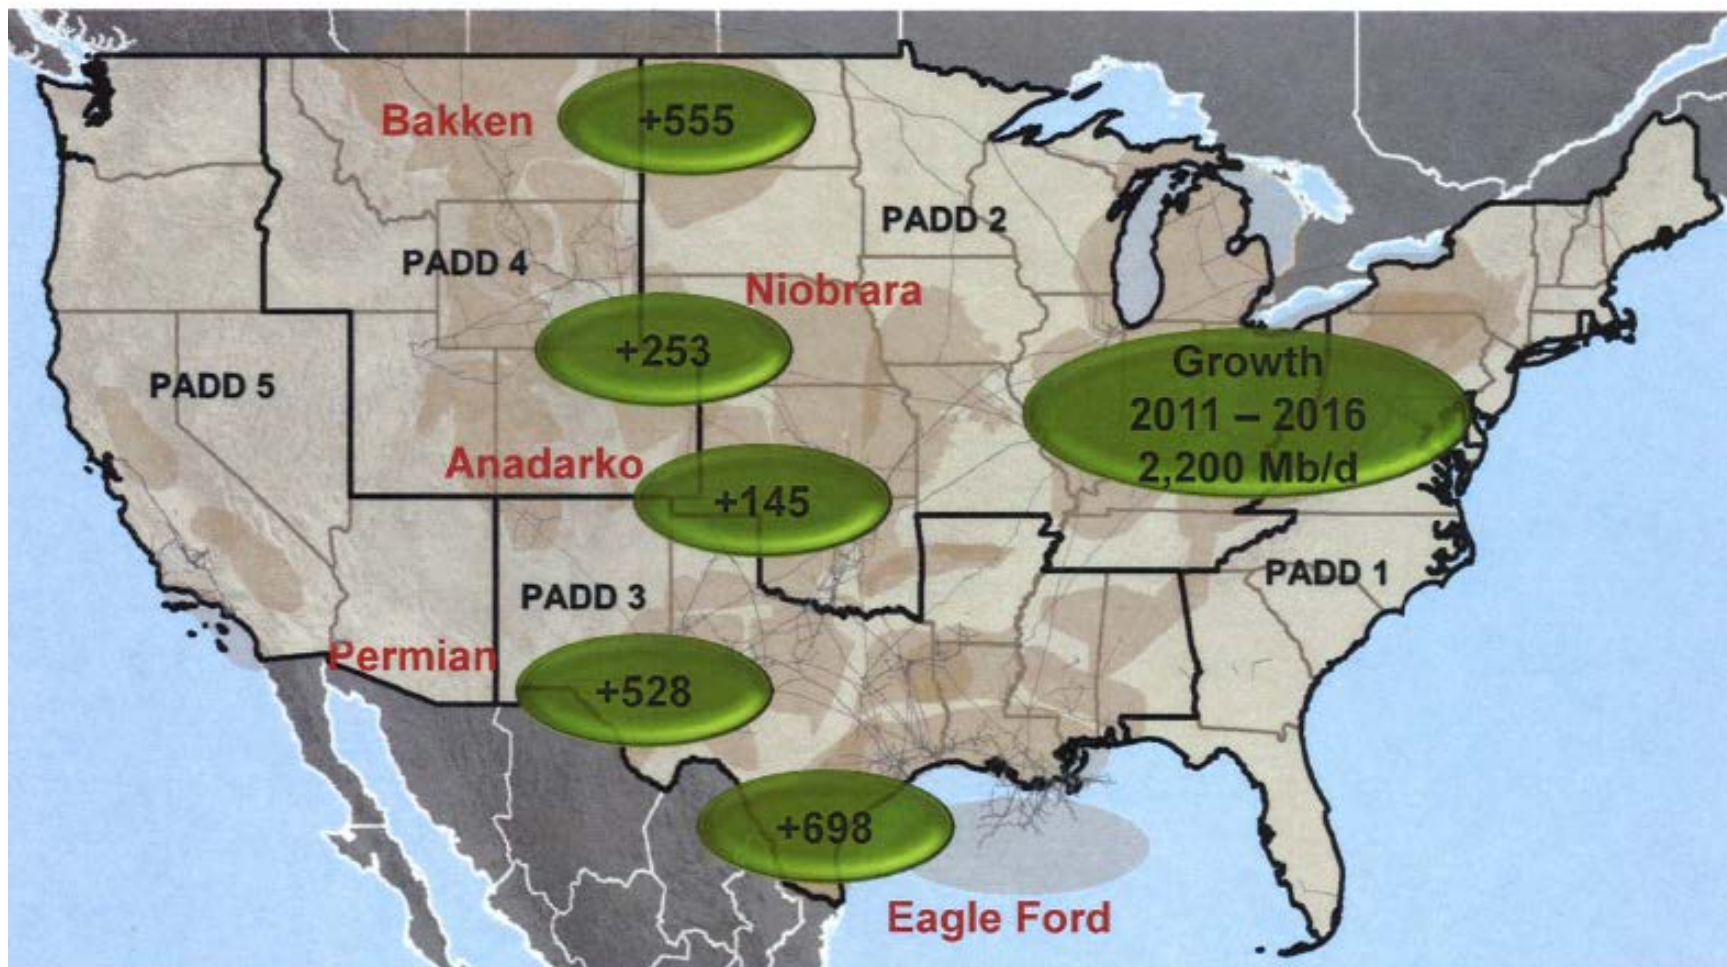

- « Domestic onshore Crude Oil development could be the next growth avenue for U.S. E&P companies and thus spur the next wave of infrastructure build-out
- « Spreads and margins continue to be very attractive for MLPs that process and transport Natural Gas Liquids (NGLs)
- « US petrochemical producers have a significant cost advantage relative to the rest of the world given the availability of relatively cheap NGL feedstocks
- « Significant multi-billion dollar petrochemical expansion plans already announced
 - Shell in Pennsylvania
 - Dow Chemical on the Gulf Coast

U.S. Active Rig Locations: Resource Plays Dominate

What to look for in 2012...

Continuing...

- « Dispersion of returns across the MLP asset class
- « Equity market volatility
- « Low yield environment driving funds flows to MLPs
- « Success and failures based on transformation of energy business in North America

Developing...

- « Themes emerging as we undergo a “midstream makeover” in North America
- « New managers in the space drawn to the momentum
- « Varying manager performance as “closet indexing” no longer works
- « The transformation of energy infrastructure in North America will create winners and losers

2012 Investment Themes and Opportunities

« **Subsectors of softness:**

- natural gas storage
- long haul natural gas pipelines (depressed location differentials)
- retail propane demand

« **“yield-starved” investors** continue to seek MLPs for their attractive yields in a low interest rate environment – per the Fed, low rates are likely to continue with potential rate increases not likely until mid-2014 at the earliest

« **Corporate credit spreads** have room to tighten (good for MLPs)

« **Commodity prices** are largely favorable, particularly crude oil and NGLs

« **Robust acquisition market** supported by open capital markets and improved costs of capital, but tempered by stiff competition

« **MLP Investment products** (ETNs, ETFs, CEFs, Mutual Funds, etc.) will provide additional opportunities to drive fund flows into the space

MLP Subsector Performance: 1st Quarter 2012

- 2) Returns shown are for Dec.31, 2011 – March 30, 2012

MLP Distribution Growth Has Historically Exceeded Inflation

Unlike fixed-coupon yield investments which have suffered during prior inflationary environments, MLPs have provided a hedge against inflation.

MLPs have historically been an effective inflation hedge because:

- « They own real assets, the value of which tends to inflate over time
- « They often have “inflation-plus” pricing, resulting in the prices of an MLP’s services rising faster than inflation
