Wednesday & Thursday, April 14 & 15, 2021

The Roadmap To Zero - Moving From Discussion To Delivery

Dr. Grahaeme Henderson OBE

Senior Vice President,
Shipping & Maritime

Shell International Trading & Shipping
Company Limited

Grahaeme and Michael's discussion focused on how the shipping industry can deliver the change needed to achieve its decarbonization ambitions. Grahaeme highlighted that amongst other factors, such as the business case and disruption, how lack of alignment on future fuels can act as a barrier.

Mr. Michael Parker

Chairman, Global Shipping
Logistics & Offshore
Citi

He made the case for hydrogen as the most likely fuel to succeed for deep-sea shipping on the basis of managing safety risks, lower long-term costs, and greater total emissions potential.

Looking at what the most significant drivers of change are for shipping's decarbonization, Grahaeme noted the importance of making emissions reductions today with LNG, while developing and deploying fuel cell and energy efficiency technologies, which will enable zero emission fuels.
